***Allowable Subject Matter***

Claims 1-26 are allowed.

The following is an examiner's statement of reasons for allowance:

The cited prior art taken alone or in combination does not fairly suggest the claimed invention of multiple software components are able to use a single device, and the device should only be controlled by one software component at any given time. In some circumstances a first software component access a network processor to exchange information using a secure network protocol while at other times a second component uses the network processor as a general encryption and/or decryption engine. Specifically, claims 1, 13, 23 and 25 are directed to determining via plurality of flags stored at a PCI device, first software component associated with first function and second component associated with second function, flags are to indicate free or busy, setting flag component to busy, first function access the PCI device if either the second component flag is set to free. Cited art teaches speculation indicator associated with memory location to control but fails to teach speculation indicator control what function the processor will perform and software components are able to use a single device, and the device should only be controlled by one software component at any given time. Therefore, the claimed invention improves on mutual exclusion, progress and deadlock situation.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
